

PostureScreen Comparison Report for Arnaldo Dominguez performed on 04/04/17 and 04/15/17

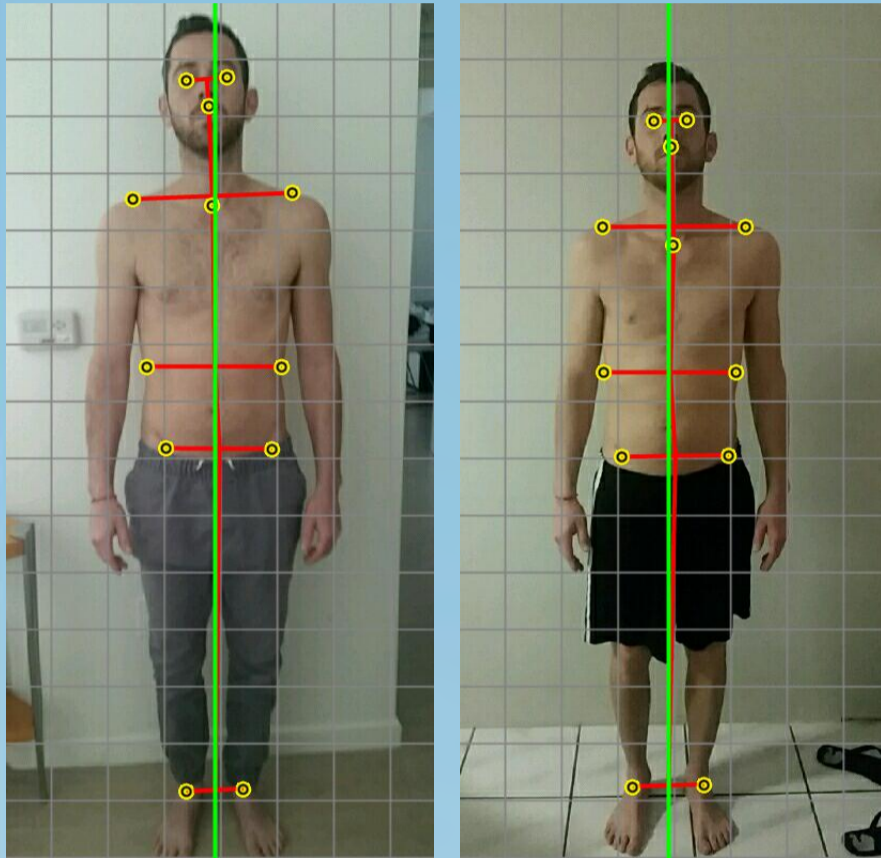

The purpose of this PostureScreen report is to objectively demonstrate the measurable changes in your standing neutral posture. Since posture can be considered the window to the spine, specific abnormal postural displacements are associated with specific spinal positions. If your posture is left uncorrected, then your spine skeletal system, discs, ligaments, blood vessels, muscles and spinal nerves will be under constant asymmetrical stress and will eventually adapt with pathological changes. The benefits of near normal posture is obvious.

It is advisable to continue to seek corrective type care until your posture (and spinal alignment) is as close to normal as possible.
